

Google Cloud Fundamentals: Big Data and Machine Learning

ID GO-GCF-BDM Duración 1 día

Quién debería asistir

This class is intended for the following participants:

- Data analysts, Data scientists, Business analysts getting started with Google Cloud Platform
- Individuals responsible for designing pipelines and architectures for data processing, creating and maintaining machine learning and statistical models, querying datasets, visualizing query results and creating reports
- Executives and IT decision makers evaluating Google Cloud Platform for use by data scientists

Este curso es parte de las siguientes Certificaciones

Google Cloud Certified Professional Data Engineer (PDE)

Prerrequisitos

To get the most out of this course, participants should have:

- Basic proficiency with common query language such as SQL
- Experience with data modeling, extract, transform, load activities
- Developing applications using a common programming language such Python
- Familiarity with Machine Learning and/or statistics

Objetivos del curso

This course teaches participants the following skills:

- Identify the purpose and value of the key Big Data and Machine Learning products in the Google Cloud Platform
- Use Cloud SQL and Cloud Dataproc to migrate existing MySQL and Hadoop/Pig/Spark/Hive workloads to Google Cloud Platform
- Employ BigQuery and Cloud Datalab to carry out interactive data analysis
- Train and use a neural network using TensorFlow
- Employ ML APIs
- Choose between different data processing products on the Google Cloud Platform

Contenido del curso

Module 1: Introducing Google Cloud Platform

- Google Platform Fundamentals Overview
- Google Cloud Platform Data Products and Technology
- Usage scenarios
- Lab: Sign up for Google Cloud Platform

Module 2: Compute and Storage Fundamentals

- CPUs on demand (Compute Engine)
- A global filesystem (Cloud Storage)
- CloudShell
- Lab: Set up a Ingest-Transform-Publish data processing pipeline

Module 3: Data Analytics on the Cloud

- Stepping-stones to the cloud
- CloudSQL: your SQL database on the cloud
- Lab: Importing data into CloudSQL and running queries
- Spark on Dataproc
- Lab: Machine Learning Recommendations with SparkML

Module 4: Scaling Data Analysis

- Fast random access
- Datalab
- BigQuery
- Lab: Build machine learning dataset
- Machine Learning with TensorFlow
- Lab: Train and use neural network
- Fully built models for common needs
- Lab: Employ ML APIs

Module 5: Data Processing Architectures

- Message-oriented architectures with Pub/Sub
- Creating pipelines with Dataflow
- Reference architecture for real-time and batch data processing

Module 6: Summary

- Why GCP
- Where to go from here

Google Cloud Fundamentals: Big Data and Machine Learning (GCF-BDM)

- Additional Resources

Google Cloud Fundamentals: Big Data and Machine Learning (GCF-BDM)
