## ¿Por qué ExecuTrain?

ExecuTrain es un proveedor de entrenamiento corporativo a nivel internacional y líder mundial en la capacitación empresarial. Contamos con más de 30 años de Experiencia y con más de 75 mil personas capacitadas a nivel Nacional.

Te guiamos en la definición de tus requerimientos de capacitación, en las diferentes etapas:

- ✓ Detección de necesidades, evaluación de conocimientos, plan de capacitación y seguimiento posterior para elegir el plan de capacitación como tú lo necesitas.
- ✓ El **más amplio catálogo de cursos**, desde un nivel básico hasta los niveles de conocimientos más especializados.
- ✓ En ExecuTrain el material y la **metodología están diseñados por expertos en aprendizaje humano**. Lo que te garantiza un mejor conocimiento en menor tiempo.
- ✓ Tú puedes confiar y estar seguro del aprendizaje porque nuestro **staff de instructores es de primer nivel**, algunos de los cuales son consultores en reconocidas empresas.
- ✓ No pierdas tu tiempo, los cursos están diseñados para un aprendizaje práctico.

**Nuestro compromiso es que tú aprendas, si no quedas satisfecho con los resultados del programa, podrás volver a tomar los cursos hasta tu entera satisfacción o la devolución de tu dinero.**

## Modalidad de Servicio

### Cursos en Fecha Calendario

Súmate a nuestros grupos en fechas públicas.

### Cursos Privados

On site, en nuestras instalaciones o en línea con instructor en vivo.

### Autoestudio con soporte de instructor

Cursos en modalidad autoestudio, con acceso 24/7 a la plataforma de estudio, con soporte de instructor y foros de ayuda

## WS011WV / Windows Server Administration

This 5-day course is a comprehensive guide for all key areas of Windows Server 2022 administration including components and technologies with respect to configuring, using, and maintenance. The course includes content on identity services (AD DS and Entra ID, previously known as Azure AD), networking, virtualization, security, high availability, and disaster recovery.

### Audience Profile

This course is intended for IT professionals who have some experience working with Windows Server and want to learn about the administration of core components and technologies in Windows Server 2022.

### Required Prerequisites

- ✓ Some exposure to and experience with AD DS concepts and technologies in Windows Server 2016 or later
- ✓ Experience working with and configuring Windows Server 2016 or later
- ✓ Experience and an understanding of core networking technologies such as IP addressing, name resolution, and Dynamic Host Configuration Protocol (DHCP)
- ✓ Experience working with and an understanding of Microsoft Hyper-V and basic server virtualization concepts
- ✓ An awareness of basic security best practices
- ✓ Experience working directly with Windows client operating systems such as Windows 10 or later
- ✓ Basic experience with Windows PowerShell

### Benefits

- ✓ Administer Windows Server 2022 and earlier versions.
- ✓ Administer and configure networking services in Windows Server 2022.
- ✓ Administer and configure virtualization services in Windows Server 2022.
- ✓ Administer and configure security services in Windows Server 2022.
- ✓ Administer and configure high availability and disaster recovery services in Windows Server 2022.

## Modules

### Module 1: Windows Server Administration

This module covers administration tools for Windows Server and it also introduces versions of Windows Server 2022.

#### Lessons

- Overview of Windows Server administration principles and tools
- Introducing Windows Server 2022
- Overview of Windows Server Core

Lab 1: Deploying and configuring Windows Server Core

- Exercise 1: Deploying and configuring Server Core
- Exercise 2: Implementing and using remote server administration

After completing this module, students will be able to:

- Describe and use administration tools in Windows Server
- Describe Windows Server 2022 and its key features
- Implement and use Server Core

### Module 2: Identity Services in Windows Server

This module covers important identity roles in Windows Server. In the first place, it discusses Active Directory Domain Services, Certificate services, and cloud-based identity service Azure AD.

#### Lessons

- Overview of AD DS
- Deploying Windows Server domain controllers
- Overview of Azure AD
- Implementing Group Policy
- Overview of AD CS

Lab 1: Implementing identity services and Group Policy

- Exercise 1: Deploying a new domain controller on Server Core
- Exercise 2: Configuring Group Policy
- Exercise 3: Deploying and using certificate services

After completing this module, students will be able to:

- Describe AD DS and explain how it works
- Deploy Windows Server domain controllers
- Describe Azure AD
- Use Group Policy to manage Windows Server based environment
- Describe and use AD CS

### Module 3: Network Infrastructure Services in Windows Server

This module covers core networking services in Windows Server – DHCP, DNS and IPAM.

#### Lessons

- Deploying and managing DHCP
- Deploying and managing DNS services
- Deploying and managing IPAM

Lab 1: Implementing and configuring network infrastructure services in Windows Server

- Exercise 1: Deploying and configuring DHCP
- Exercise 2: Deploying and configuring DNS
- Exercise 3: Implementing IPAM

After completing this module, students will be able to:

- Describe, configure, and use DHCP service in Windows Server
- Describe, configure and use DNS

- Describe, configure and use IPAM to manage networking services

#### **Module 4: File servers and storage management in Windows Server**

This module covers services that deal with file systems, volumes, and storage. Students will also learn about data deduplication, sharing, iSCSI, and DFS services.

##### Lessons

- Volumes and file systems in Windows Server
- Implementing sharing in Windows Server
- Implementing Storage Spaces in Windows Server
- Implementing Data Deduplication
- Implementing iSCSI
- Deploying DFS

##### Lab 1: Implementing storage solutions in Windows Server

- Exercise 1: Implementing Data Deduplication
- Exercise 2: Configuring iSCSI storage
- Exercise 3: Configuring redundant storage spaces
- Exercise 4: Implementing Storage Spaces Direct

After completing this module, students will be able to:

- Describe volumes and file systems in Windows Server
- Implement sharing in Windows Server
- Describe and implement Storage Spaces
- Describe and configure Data Deduplication service
- Describe iSCSI
- Deploy DFS

#### **Module 5: Hyper-V virtualization and containers in Windows Server**

In this module, students learn about virtualization services in Windows Server. The module covers

Hyper-V, options to secure virtualization environment, containers and Kubernetes.

##### Lessons

- Hyper-V in Windows Server
- Configuring VMs
- Securing virtualization in Windows Server
- Containers in Windows Server
- Overview of Kubernetes

##### Lab 1: Implementing and configuring virtualization in Windows Server

- Exercise 1: Creating and configuring VMs
- Exercise 2: Installing and configuring containers

After completing this module, students will be able to:

- Describe and use Hyper-V platform in Windows Server
- Configure VMs on Hyper-V platform
- Secure virtualization environment in Windows Server
- Describe Containers
- Describe Kubernetes

#### **Module 6: High availability in Windows Server**

This module covers high availability in Windows Server. It is primarily focused on Failover Clustering feature.

##### Lessons

- Planning for failover clustering implementation
- Creating and configuring failover clusters
- Overview of stretch clusters
- High availability and disaster recovery solutions with Hyper-V VMs

##### Lab 1: Implementing failover clustering

- Exercise 1: Configuring iSCSI storage
- Exercise 2: Configuring a failover cluster
- Exercise 3: Deploying and configuring a highly available file server

- Exercise 4: Validating the deployment of the highly available file server

After completing this module, students will be able to:

- Plan failover clustering implementation
- Create failover clusters
- Describe stretched clusters
- Apply failover clustering to achieve high availability with Hyper-V platform

### Module 7: Disaster recovery in Windows Server

This module covers technologies to implement disaster recovery in Windows Server environment.

Lessons

- Hyper-V Replica
- Backup and restore infrastructure in Windows Server

Lab 1: Implementing Hyper-V Replica and Windows Server Backup

- Exercise 1: Implementing Hyper-V Replica
- Exercise 2: Implementing backup and restore with Windows Server Backup

After completing this module, students will be able to:

- Describe and implement Hyper-V Replica
- Implement backup and restore with Windows Server backup

### Module 8: Windows Server security

In this module, students learn about security technologies that address various critical components in Windows Server environment.

Lessons

- Credentials and privileged access protection in Windows Server
- Hardening Windows Server
- JEA in Windows Server
- Securing and analyzing SMB traffic

- Windows Server update management

Lab 1: Configuring security in Windows Server

- Exercise 1: Configuring Windows Defender Credential Guard
- Exercise 2: Locating problematic accounts
- Exercise 3: Implementing LAPS

After completing this module, students will be able to:

- Describe credentials and privileged access protection
- Describe and perform hardening Windows Server
- Describe and implement JEA in Windows Server
- Describe who to secure and analyze SMB traffic
- Describe and implement Windows Server update management

### Module 9: RDS in Windows Server

This module covers Remote Desktop services in Windows Server. It also deals with VDI implementations.

Lessons

- Overview of RDS
- Configuring a session-based desktop deployment
- Overview of personal and pooled virtual desktops

Lab 1: Implementing RDS in Windows Server

- Exercise 1: Implementing RDS
- Exercise 2: Configuring RemoteApp collection settings
- Exercise 3: Configuring a virtual desktop template

After completing this module, students will be able to:

- Describe and configure RDS
- Configure a session-based desktop deployment

- Implement personal and pooled virtual desktops

### **Module 10: Remote access and web services in Windows Server**

In this module, students learn about remote access technologies for Windows Server, as well as about IIS deployment and usage.

#### Lessons

- Overview of RAS in Windows Server
- Implementing VPNs
- Implementing NPS
- Implementing Always On VPN
- Implementing Web Server in Windows Server

#### Lab 1: Deploying network workloads

- Exercise 1: Implementing Web Application Proxy
- Exercise 2: Implementing VPN in Windows Server
- Exercise 2: Deploying and configuring Web Server

After completing this module, students will be able to:

- Describe and implement RAS in Windows Server
- Describe and implement VPNs
- Describe and implement NPS
- Describe and implement Always On VPN
- Describe and implement Web Server role in Windows Server

### **Module 11: Server and performance monitoring in Windows Server**

This module covers monitoring tools and technologies available in Windows Server.

#### Lessons

- Overview of Windows Server monitoring tools
- Using Performance Monitor
- Monitoring event logs for troubleshooting

#### Lab 1: Monitoring and troubleshooting Windows Server

- Exercise 1: Establishing a performance baseline
- Exercise 2: Identifying the source of a performance problem
- Exercise 3: Viewing and configuring centralized event logs

After completing this module, students will be able to:

- Describe and use performance monitoring tools
- Describe and use server monitoring tools
- Use event logs for troubleshooting

### **Module 12: Upgrade and migration in Windows Server**

This module covers available tools in Windows Server for server upgrade and migration. It also covers AD DS migration and upgrade process.

#### Lessons

- AD DS Migration
- Storage Migration Service
- Windows Server migration tools

#### Lab 1: Migrating server workloads

- Exercise 1: Selecting a process to migrate server workloads
- Exercise 2: Planning how to migrate files by using Storage Migration Service

After completing this module, students will be able to:

- Describe and perform AD DS migration and upgrade
- Describe and perform storage migration
- Describe and use Windows Server migration tools.
